

- Multi Channel Power Control
- Power Distribution management
- Suitable to communicate with PLC & Multiloop
- High precision measurement
- Elimination of power overshoot
- Power factor maintained close to 1
- Most popular Field Bus available
- Easy to use
- CE EMC listed

**CD AUTOMATION**

**POWERED BY INNOVATION**

# REVO PC

POWER CONTROLLER

## Multi-Channel SCR Power Controller

Suitable to control Electric Heaters  
and High Power Industrial Heating Systems

[www.cdautomation.com](http://www.cdautomation.com)  
Revo PC Catalog 2022

# HAVE YOU CONSIDERED HOW POWER PEAKS COULD BE A PROBLEM TO YOUR BUSINESS?

The REVO PC unit is designed to handle applications with multiple zones. This enhanced unit, thanks to a particular algorithm, minimizes your energy costs through the synchronization and the power limit for each zone. Revo PC keeps your instantaneous power within the limits of your electricity supply contract.

## REVO PC POWER CONTROLLER

Created specifically for industrial multi-zone applications, REVO PC can be configured to control up to 24 channels/zones. Each zone can be sized from 30A up to 800A (REVO S Family with SSR input and Random Firing).

CURRENT WAVEFORM WITHOUT POWER CONTROL OPTIMISATION

CURRENT WAVEFORM WITH POWER CONTROL OPTIMISATION

## IMPORTANT POWER CONTROL FUNCTIONALITY IS OFFERED BY REVO PC INCLUDING:

- Power distribution management
- Elimination of power overshoot.
- Power factor maintained close to 1.
- Energy monitoring true RMS measurement
- Stay connected with the most popular Field Bus protocols.
- Eliminate use of PLC output modules by using comms for Power to CPU connections.
- Alarm notification per zone of heater break and thyristor short circuit.
- REVO PC's considered design not only helps you save start-up costs but ensures you keep on saving money throughout the products lifetime.

# POWER OPTIMIZATION

Without REVO PC

With REVO PC

In multi-zone applications, the non-synchronized insertion of the different loads can create a simultaneity of insertions generating peak current that produces disturbances on the power line. REVO PC distributes the power demand of the individual zones keeping the line current as constant as possible.

# NETWORK DISTURBANCE

Without REVO PC

With REVO PC

The insertion of loads that are not synchronized on the power line can cause disturbances, such as fluctuations in the mains voltage (Flickering), network holes and losses on the power cables.

# HARMONIC COMPONENT

Without REVO PC

With REVO PC

The management and insertion of unsynchronized loads can lead to an increase in the harmonic component generated (THD). This effect increases losses, generates noise and can generate overheating of the power cables.

# OPTIMIZATION OF ENERGY COST

Without REVO PC

With REVO PC

Thanks to its control strategy and the distribution of the power required in the management of multizone loads, REVO PC keeps the Power Factor values close to 1.

# CONNECTIVITY AND CONFIGURATION

READ for each zone	WRITE for each zone
Set Point	Set Point
Alarm	Load configuration
Voltage	
Power	
Current	
Heater Break Alarm	
SCR Short Circuit Alarm	

# EFFICIENT ENGINEERING

A key benefit is the incorporation of REVO PC into the Siemens TIA Portal. By using PROFINET I/O field bus or Modbus RTU and TCP communication with Siemens S1500 PLC, all REVO PC units will fall back on a shared database, a standardized operating concept and centralized services. You will get benefit from faster commissioning and reduced engineering overhead.

On our website [www.cdautomation.com](http://www.cdautomation.com) you can download libraries developed in the SIMATIC TIA Portal environment.

These libraries, integrated in the automation projects developed in the SIMATIC TIA Portal environment, will make the integration and dialogue of our products with the SIEMENS PLCs of the S7 1500 series simple and immediate for our customers.

The libraries will be compatible with REVO PC/PN products that will make use of Modbus TCP, Modbus RTU and PROFINET I/O communication.

# CONFIGURATOR SOFTWARE

CDA Thyristor configurator software is free and available to download from our site [www.cdautomation.com](http://www.cdautomation.com).

If the Order Code is in line with requirement, then REVO PC has been already configured in Factory and it's ready to use. You need the software only to modify the ordered configuration. Anyway we suggest to check the unit on the machine with the "Test unit" section.

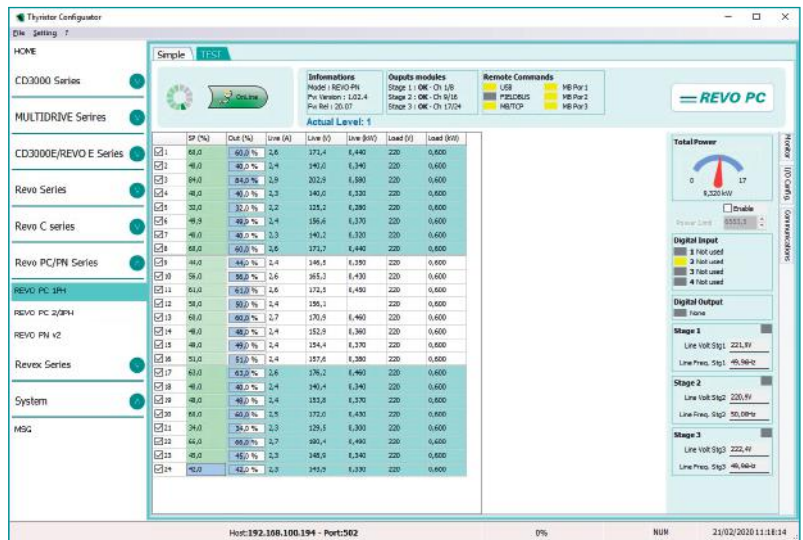

To install the software, launch the program and follow the instructions on the screen. Run the software configurator and set the serial port of the PC with baudrate.

## TEST VIEW

This page can be used to monitor and adjust the operation of the REVO PC while communicating with it in real time.

Main features available are:

- Set the total number of zones
- Select the source for Power Set Point
- Configure and Monitor the Digital Inputs
- Detect if an alarm is activated
- Set the power of each load
- Set minimum current threshold for each channel
- Main process variable display
- Source power set point display
- Total power limit setting
- Voltage and current calibration

## MODBUS MASTER

REVO PC can have Modbus master port as an option. With this feature it's possible to acquire external set point from different temperature controller with Modbus slave port.

Each temperature control set can be associated to one or more channel.

In the example picture on the left the channel 5 is associated with the temperature controller with address 1. The parameter 3 is dedicated in this controller for the set point.

Instead of using the main output of the controller to set the power, we use the value of power set point available for the communication.

ID	Par Num	Err sts
1	1	3
2	1	3
3	1	3
4	1	3
5	1	3
6	1	3
7	1	3
8	2	3
9	2	3

## CONFIGURATION CABLE

To connect the Revo PC to computer is necessary use a standard micro USB cable (our code CCX).

The windows driver for USB connection is installed by thyristor configurator software installer.

To personal computer  
USB port

USB PORT

# REVO PC POWER CONTROLLER

REVO PC system is based on an intelligent unit that manages one or more basic SCR power controller. All currents are measured with an external current transformer. REVO PC acquires the power setpoint from different sources including: single or multi zone temperature controller, PLC or HMI.

## Control Unit

REVO PC up to 24 channels

- SSR outputs to control up to n° 24 REVO S 1PH
- High precision voltage transducer RS485 and Modbus TCP available as standard
- This Unit transform a simple SCR Power Switch into an Intelligent Unit able to communicate and to have HB Alarm

## Power Unit

REVO S 1PH

- SCR power switches from 30 to 800A
- Internal Fuse
- Max Voltage 480-600-690V
- Up to 24 REVO S connectable
- High precision current transducer

# REVO S SELECTION FOR REVO PC

## REVO S 1PH SIZE AND DIMENSION

**SR6** H 121 x W 36 x D 185 - 0,61KG.

**SR12** H 269 x W 93 x D 170 - 3,4KG.  
**SR15** H 273 x W 93 x D 170 - 3,6KG.

**S11** H 440 x W 137x D 270 - 10,5KG.

**S12** H 520 x W 137 x D 270 - 15KG.

**S15** H 560 x W 137x D 270 - 10,5KG.

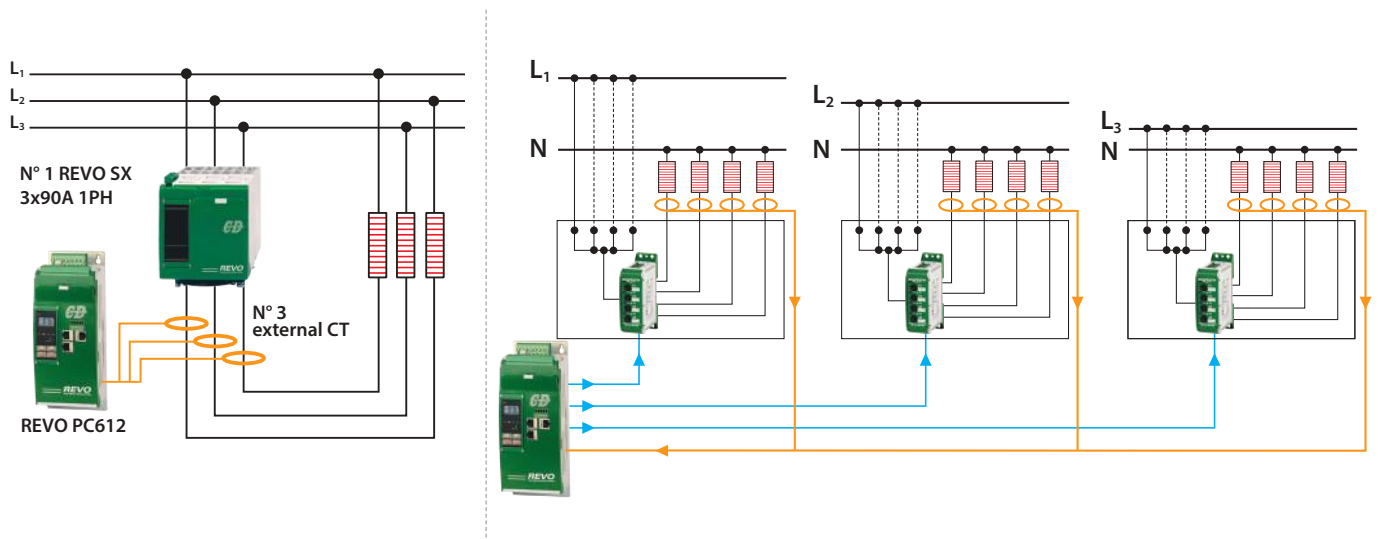

### Technical Specification: REVO S 1PH to be coupled with REVO PC

- **Load type:** Normal resistance, infrared short and medium waveform
- **Inputs:** SSR Standard
- **Firing mode:** Zero Crossing
- **Operating temperature:** 0 to 40°C without derating
- **Comply with EMC** and cUL® up to 800A as an option
- **100 KA:** Short Circuit Current rating (SCCR) up to 600V
- **Data sheet:** More details on "REVO S 1PH" Manual

# INFRARED OVEN AND THERMOFORMING

## INFRARED LAMPS WITH MEDIUM AND SHORT WAVE FORM

REVO PC is the best solution to control all types of infrared lamps.

The robust junction with high I<sup>2</sup>T allows it to drive short-wave IR lamps.

There are several types of soft start, which reduce much of the flickering phenomenon.

The synchronization makes the power factor close to one.

Power Network voltage fluctuations are compensated instantly via the feedback in the unit.

# PLASTIC EXTRUSION MACHINE

## AUTOMATION SOLUTION FOR EXTRUSION LINES

- Scalable power management, single extruder or full line.
- Cyclic reading and writing of process variables.
- Short circuit SCR and load brake diagnostics.
- Reduced power consumption due to power grid fluctuations through live control.
- Maintains instantaneous power in the contractual limits with a power factor close to one.
- Strong bulk reduction and cabling for co-extrusion systems that can pass 100 zones.
- Distributed solutions with cable and labour cost reduction.

# SPECIAL LOADS

## MOSI<sub>2</sub> HEATING ELEMENTS (KANTHAL SUPER® ELEMENTS)

This kind of heaters increase resistivity sharply with temperature but do not change with age.

The initial current at cold elements can be 16 times the rated current.

For this type of application, it is necessary to use units that allow a phase angle firing with soft start (3 sec.) and current limit.
